hey foundation team sent me this <https://grants.stacks.org/dashboard/grants/466>

Stacks Foundation

Stack Grant

it's a pretty cool idea - I was thinking about building this but never had the time. let me know if you want to integrate Inswap API happy to help it can even be simplified with triggerswap contracts

Brian Harrington 05/26/2022

Would love to learn more about your Lightning payout stacking pool
That solves what I just posted about the small on chain UTXO's

Jasper. 06/08/2022

Hey Peters

First off want to say I'm super excited for the lightning pool and this was one of the items on my grants wishlist. I think there are some really interesting concepts for the pool like using Lud-16 for payouts when the pool is selected for a slot allowing stacks to receive payment then rather than at the end of the stacking cycle or stream Sats to stackers every hour/day assuming they have a channel open with you.
I think it would also be beneficial for the Operators LN node to also be a LNSwap provider.

Got it, makes sense. Do you have any materials that go a bit deeper into the structure I can go over? Daemon could be interested in being the partner here

it could also be a nice structure to add the mining pool capability to as well that we are working on for after the 2.1 upgrade
